

Patricio Rivera Celaya

Backend Developer | Python & FastAPI

 Hermosillo, Sonora, México
 riverac.93@gmail.com

 arhioz.github.io (Portfolio)
 github.com/Arhioz

Professional Summary

Self-taught Backend Developer specializing in the design and construction of scalable, fast, and efficient REST APIs using Python and FastAPI. Hands-on experience in modeling and optimizing relational databases with PostgreSQL, SQLite, and SQLAlchemy, packaging applications with Docker, and deploying on Linux (Debian) and Windows environments. Complemented by solid expertise in IT infrastructure management, networking, and DevOps automation. Focused on writing clean, maintainable code and applying software architecture best practices to solve complex technical challenges.

Tech Stack & Skills

Languages & Frameworks	Python, FastAPI
Databases & ORM	SQL, PostgreSQL, SQLite, SQLAlchemy
Infrastructure & Tools	Bash, Docker, Docker Compose, Git, GitHub, AWS EC2, Linux (Debian), Windows
Languages	Español (Nativo), Inglés CEFR C2 Proficient (International English Test)

Work Experience

Freelance Backend Developer
Independent Work

January 2026 - Present

- Design and development of custom REST APIs utilizing Python and FastAPI.
- Implementation of relational databases, user authentication, application containerization with Docker, and process automation for private clients.

IT Support Engineer

February 2015 - Present

Secretaría de Educación y Cultura (SEC) — Hermosillo, Sonora

- Preventive and corrective maintenance of IT infrastructure and institutional server systems.
 - Active Directory administration, managing permissions, users, and local network policies.
 - Physical and logical maintenance of server racks, LAN network diagnostics, and optimization.
 - Specialized technical support for end-users and efficient resolution of critical IT incidents.
-

Featured Projects

Arhioz-Gym — Gym Operations Management Backend

https://github.com/Arhioz/arhioz_gym

Technologies: Python, FastAPI, PostgreSQL, SQLAlchemy, Docker

- Designed and implemented a REST API for centralizing and managing gym operational workflows.
- Modeled efficient relational data structures with SQLAlchemy and PostgreSQL persistence.
- Containerized application and infrastructure with Docker to streamline deployment and portability.

Zahori-Project — Personal Tracking & Logging Service

<https://github.com/Arhioz/Zahori-Log>

Tecnologías: Python, FastAPI, PostgreSQL, SQLAlchemy, Docker

- Developed a backend service to query, log, and structure a personal entertainment tracking journal.
- Integrated external APIs to automate and accelerate database record creation.
- Built optimized dynamic endpoints paired with robust relational persistence.

Private Homelab Infrastructure & DevSecOps Automation

Technologies: Debian 13, Docker, Tailscale, Python, Systemd

- **Architecture & Servers:** Deployed and managed a headless Linux Debian server ("El Centinela") to orchestrate containerized services via Docker and CasaOS.
- **Security & Networking:** Implemented a private MESH network using Tailscale VPN for secure global remote access without exposing external ports.
- **Automation Bots (Python):** Built Zahorí, a modular Python Discord bot (discord.py / Cogs) running as a systemd service for real-time hardware monitoring (CPU, RAM, Temp), Docker container management, and PIN-authenticated safe shutdowns.
- **Disaster Recovery & High Availability:** Integrated UPS power control tools (NUT) for automated

graceful shutdowns during outages. Created resilient disk mounting strategies (UUIDs/nofail) and automated Bash scripts for weekly hot-backups.

Education

B.S. in Systems Engineering (University Studies)

Universidad de Sonora
Hermosillo, Sonora
2011-2015

Certifications

International English Test — Nivel CEFR C2 (Proficient)

International English Test
Accredited
February 2026
